

Introducing a Safer & Simpler Way for Students to get their Breakfast and Lunch Meal!!

The Child Nutrition Services (CNS) Department is introducing a new way to make getting a breakfast and lunch meal faster, safer, and easier for your student.

The **HI-5 Wave Scanner** is a multi-use unit that allows a touch-free system for students to get their meal.

What is the HI-5?™

A fast, contactless way for students to get their breakfast and lunch meals.

How does this feature work?

Students simply wave their hand above the scanner. The system detects a unique pattern in the hand using safe, touch-free technology and converts it into a secure, encrypted code.

Is my child's information safe?

Yes. This system is designed with strong security safeguards, and personal data is protected. **No photos or images are collected or stored.**

Is participation required?

No. Parents may opt out for their student and the student can use a PIN on this device.

How does my child enroll?

The CNS department will be set up at all school site registrations and on the first day of school to ensure all students are able to register into the system. Enrollment is quick and simple. Your student briefly holds their hand above the scanner, and the system creates a secure encrypted identifier for future use to receive their breakfast and lunch meals.

How does this feature benefit students and families?

- Shorter lines mean more time for students to eat and relax.
- No student can accidentally use another student's account.
- No need for students to memorize, and remember, an 8-digit student ID number during meal service.
- No meal cards to be lost, stolen, or hacked.
- A safer, more convenient daily experience for students.

If you have any questions, we are here to help and are happy to provide additional information.

Warm Regards,

Charity Campbell, MS, RD, SNS
