

Operations at the local green waste facility located on City owned airport property will conclude on August 28, 2026

The current green waste operation was originally intended as a temporary use. This transition reflects ongoing long-term planning considerations related to airport operations and future land use at the airport property, while preserving regional green waste processing capacity.

Under the new arrangement, green waste material currently processed at the airport facility will be managed by Old Durham Wood, a locally operated business that will process the material moving forward.

Residential and commercial curbside collection services will continue uninterrupted.

Starting August 29, customers are advised to haul green waste materials to Old Durham Wood, located at 1156 Oroville-Chico Hwy, Durham, CA, as the airport facility will be permanently closed.
