ACRONYMS & ABBREVIATIONS

AC: Asphalt Concrete

CIP: Capital Improvement Plan

DBE: Disadvantage Business Enterprise

DM: Deferred Maintenance

FC: Functional Classification

GASB: Governmental Accounting Standards Board

GIS: Geographic Information System

MTC: Metropolitan Transmission Commission

OL: Overlay

PCC: Portland Cement Concrete

PCI: Pavement Condition Index

PM: Preventative Maintenance

PMP: Pavement Management Program

PTAP: Pavement Technical Assistance Program

ST: Surface Type

EXECUTIVE SUMMARY

In the summer of 2023, the Harris & Associates conducted a comprehensive visual pavement distress survey for the City of Chico covering its entire street network, spanning approximately 315 centerline miles. This endeavor also included the integration of new street sections, approximately 35 centerline miles, into the existing database using GIS shape files provided by the City. The result is an updated GIS shape file that serves as a vital tool for pavement management within the city.

This updated system, known as the Pavement Management Program (PMP), plays a pivotal role in the efficient management of street pavement assets. It enables the City to:

- Inventory Street Pavement: The PMP allows for a systematic inventory of street pavement assets, ensuring a clear understanding of the extent and condition of the city's road network.
- Assess Pavement Condition: Through visual surveys and data analysis, the PMP assesses the condition of pavements, providing insights into maintenance requirements and areas in need of attention.
- Record Historical Maintenance: The program records historical maintenance data, facilitating a comprehensive understanding of past efforts and their impact on pavement condition.
- Forecast Budget Needs: By analyzing pavement conditions and historical data, the PMP aids in forecasting budgetary needs for pavement maintenance and rehabilitation.
- Citywide Impact Assessment: The system offers a holistic view of the impact of funding allocation on the overall pavement condition throughout the city over time.

Furthermore, the PMP is equipped with software-based tools that analyze pavement conditions and recommend rehabilitation strategies based on available funding levels. This software focuses on providing cost-effective recommendations to enhance the Pavement Condition Index (PCI), a critical metric for pavement health.

Currently, the City utilizes Metropolitan Transportation Commission's (MTC) Pavement Management System StreetSaver® online version as a critical tool to make informed, cost-effective decisions regarding its street network. This software assists in maximizing the return on investment from available maintenance and rehabilitation funds, prioritizing maintenance areas, and identifying rehabilitation needs. The PMP aligns with the recommendations MTC, which suggests allocating 3% of the budget to preventive maintenance treatments, such as surface seals or crack seals. This approach not only sustains a high PCI for streets at a relatively low cost but also allows for cost-effective maintenance of a larger pavement area compared to expensive asphalt concrete overlays and reconstructions.

For the City of Chico, the following six annual budget scenarios were generated with 3% of the annual budget applied towards preventative maintenance.

1. No Funds ($0)
2. Expected Annual Budget I ($12 million)
3. Expected Annual Budget II ($18 million)
4. Maintain PCI of 52 ($30 million)
5. Five Point Increase in PCI ($43 million)
6. Unlimited Budget ($90.2 million)

PURPOSE

The Pavement Management Program plays a pivotal role in supporting the City by furnishing up-to-date distress survey data, which is utilized for the assessment of existing pavement conditions. This helps to maintain an agency-defined desirable level of pavement performance while optimizing the expenditure of limited fiscal resources. Additionally, the implementation of a PMP system is imperative for the City to qualify for federal funding opportunities.

Specifically, the program provides administrators and maintenance personnel with:

- A current inventory of all public roadways
- The current pavement condition for all public roadways
- A project list of all pavement segments in need of maintenance, rehabilitation, or replacement
- The most cost-effective level of maintenance or repair appropriate at the time of the survey
- A forecast of budget needs for maintenance, rehabilitation, or replacement of deficient pavement sections for a selected time period, at various alternative overall condition levels

NETWORK DESCRIPTION

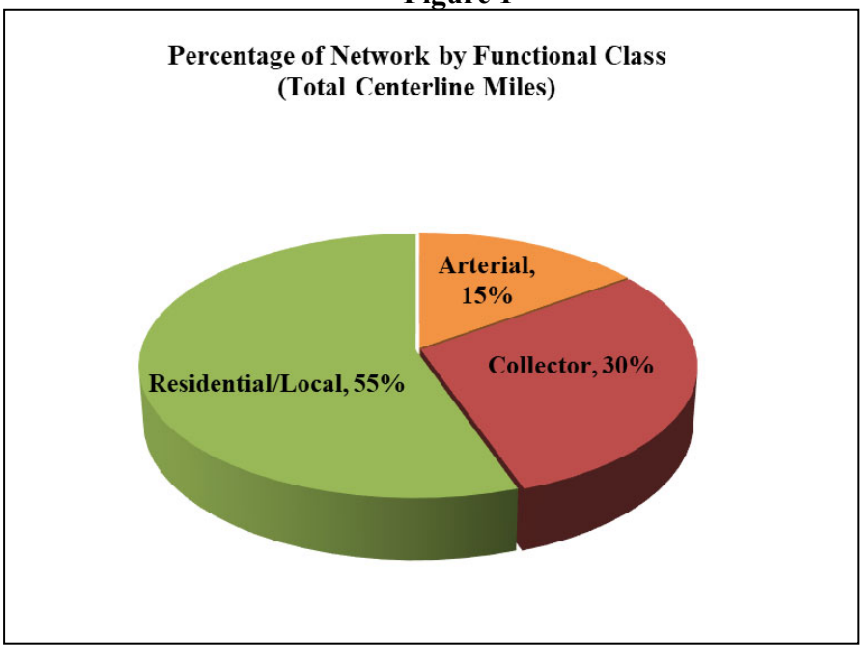

The City of Chico maintains a pavement network comprised of approximately 316 centerline miles, which is further subdivided into 2019 pavement management segments. To facilitate maintenance planning, the City has categorized its streets based on their functional class. Table 1 (provided below) illustrates the distribution of pavement mileage within the city according to functional class.

Table 1

Pavement Mileage by Functional Class					
Classification	**Total Sections**	**Total Center Line Miles**	**Total Lane Miles**	**Total Area (sq. ft.)**	**Percentage of Street Network**
Arterial	190	47.68	98.49	11,666,247	15%
Collector	451	93.17	186.35	16,444,474	30%
Residential/Local	1378	174.71	349.40	29,931,861	55%
Totals	**2019**	**315.56**	**634.35**	**58,042,582**	**100%**

Figure 1 (below) displays the percentage of each functional class in the overall network.

Figure 1

The City's pavement network has a current reconstruction value of over $751 million. The current network reconstruction value (consisting of moderate base failure repair, removal of existing surface, and pavement overlay) by functional class is displayed in Table 2 (below):

Table 2

Network Reconstruction Value					
Functional Class	**Surface Type**	**Lane Miles**	**Unit Cost/ Square Foot**	**Pavement Area (in SF)**	**Cost to Replace**
Arterial	AC	78.2	$15.23	9,480,044	$144,381,070
	AC/AC	3.9	$15.23	516,000	$7,858,680
	AC/PCC	12.7	$18.89	1,345,899	$25,422,417
	PCC	3.7	$18.65	324,304	$6,048,983
Collector	AC	182.5	$15.23	16,113,586	$245,409,915
	AC/AC	2.3	$15.23	201,288	$3,065,616
	PCC	1.6	$18.65	129,600	$2,417,325
Residential/Local	AC	347.1	$10.10	29,741,359	$300,286,605
	AC/AC	1.2	$10.10	108,740	$1,097,904
	PCC	1.1	$18.65	81,762	$1,525,041
Grand Total		**634.2**		58,042,582	$737,513,557

Table 2 (above) provides network replacement costs sorted by Functional Class and Surface Type. For each combination of Functional Class and Surface Type, the number of Lane Miles, Unit Cost (sq.ft.), Pavement Area (sq.ft.), and the cost to replace is reported. The replacement cost is based on the Category V ("Very Poor") treatment cost provided in the Decision Tree for each functional class and surface type combination. Grand totals are provided at the bottom of applicable columns.

It is important to consider the overall investment the City has in its pavements. The unit cost to repair a street segment in very poor condition (consisting of moderate base failure repair, removal of existing surface, and pavement overlay to reconstruction) is from $10.10-$18.89 per square foot or $90.87-$167.87 per square yard. The cost to reconstruct all streets (full replacement of the pavement, base, and structure of the Streets) is over $751 million.

EXISTING PAVEMENT CONDITION

The PCI is an overall measure of the condition of the street surface based on a scale of zero (0) (failed) to one hundred (100) (excellent). Table 3 (below) provides a brief description of the different distresses generally found in each PCI range.

Table 3

PCI Breakdown Descriptions		
PCI Range	**Condition**	**Description**
90-100	Excellent	Little or no distress.
70-89	Very Good	Little or no distress, with the exception of utility patches in good condition, or minor to moderate hairline cracks; typically lightly weathered.
50-69	Good	Light to moderate weathering, light load-related base failure, moderate linear cracking.
25-49	Poor	Moderate to severe weathering, moderate levels of base failure, moderate to heavy linear cracking.
0-24	Very Poor	Extensive weathering, moderate to heavy base failure, failed patches, extensive network of moderate to heavy linear cracking.

Upon completion of this survey, a Pavement Condition Index (PCI) was calculated for each PMP segment to reflect the overall pavement condition. A PCI of 0 would correspond to a badly deteriorated pavement with no remaining service life whereas a PCI of 100 would correspond to a pavement with no observed distresses. A summary of each segments representative PCI and remaining service life can be found in the Pavement Condition Index Report in Appendix I.

The Citywide average Pavement Condition Index (PCI) is 52. ‡PCI's for the City's pavement network were based on a visual distress rating system. The overall condition of City of Chico's street network rests in the "Good" range. MTC's State of Repair report states that "Approximately 75 percent of a pavement's serviceable life has been expended by the time its PCI rating falls to 60." ." Table 4 provides an overview of the City of Chico's average weighted PCI values, lane and centerline mileage, categorized by functional class and surface type.

‡Note: PCI weighted by area.

Table 4

PCI By Functional Class & Surface Type					
Functional Class	**Surface Type**	**Lane Miles**	**Centerline Miles**	**PCI**	**Weighted PCI**
Arterial	AC	78.2	37.5	56.00	60
	AC/AC	3.9	1.9	86.00	
	AC/PCC	12.7	6.4	75.00	
	PCC	3.7	1.9	98.00	
Collector	AC	182.5	91.2	42.00	42
	AC/AC	2.3	1.1	64.00	
	PCC	1.6	0.8	62.00	
Residential/Local	AC	347.1	173.6	52.00	53
	AC/AC	1.2	0.6	92.00	
	PCC	1.1	0.6	50.00	
Grand Total		**634.2**	**315.6**		**52**

Figure 2 (below) shows the City's total pavement mileage by condition category:

Figure 2

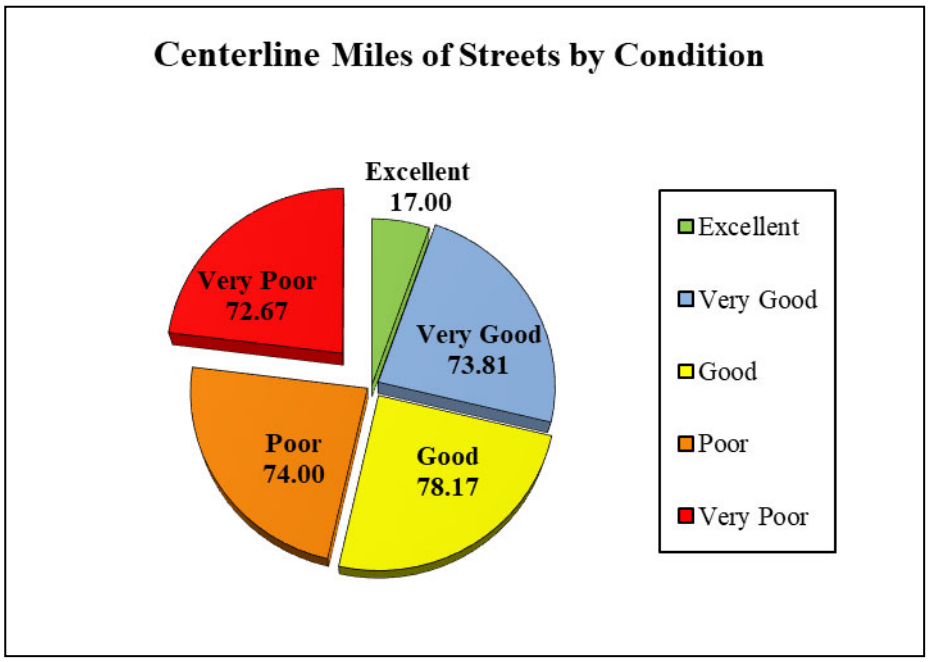

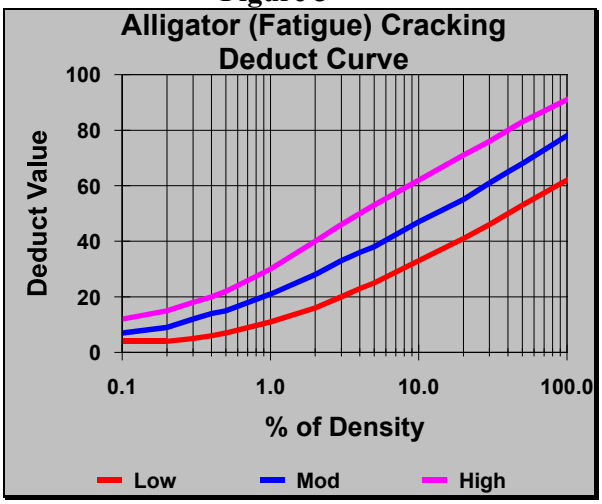

Table 5 breaks down the percentage of the street network by functional class (by area) in each condition category. Approximately 6% of the City's network is in the "Excellent," approximately 23% in the "Very Good" condition category and approximately 26% is in the "Good" condition category. About 24% is in the "Poor" category and approximately 21% of streets are in the "Very Poor" condition category.

Table 5

Percentage of Network Area by Functional Class and Condition Category					
Condition Category	**PCI Range**	**Arterial**	**Collector**	**Residential**	**Total**
Excellent	90-100	3.17%	0.26%	2.71%	6.14%
Very Good	70-89	4.74%	3.82%	14.15%	22.71%
Good	50-69	5.39%	7.44%	13.07%	25.90%
Poor	25-49	5.01%	8.58%	10.40%	23.99%
Very Poor	0-24	1.79%	8.24%	11.24%	21.26%
Totals		**20.10%**	**28.33%**	**51.57%**	**100%**

After the survey distress data was entered into the program, a distress rating was calculated for each PMP segment. The distress rating was calculated using MTC's developed algorithms. The algorithms initially assign each pavement segment a score of 100 and then deducts point values based on the pavement distresses found within the segment weighted by the quantity of each distress. The algorithms assign deduct values based on the severity and the density of each distress. Figure 3 (below) is an example of the alligator cracking distress deduct curve:

Figure 3

The algorithms weigh the total deduct value within a segment and then calculate a total distress rating between 0 (failed) and 100 (excellent).

PAVEMENT MANAGEMENT STRATEGIES

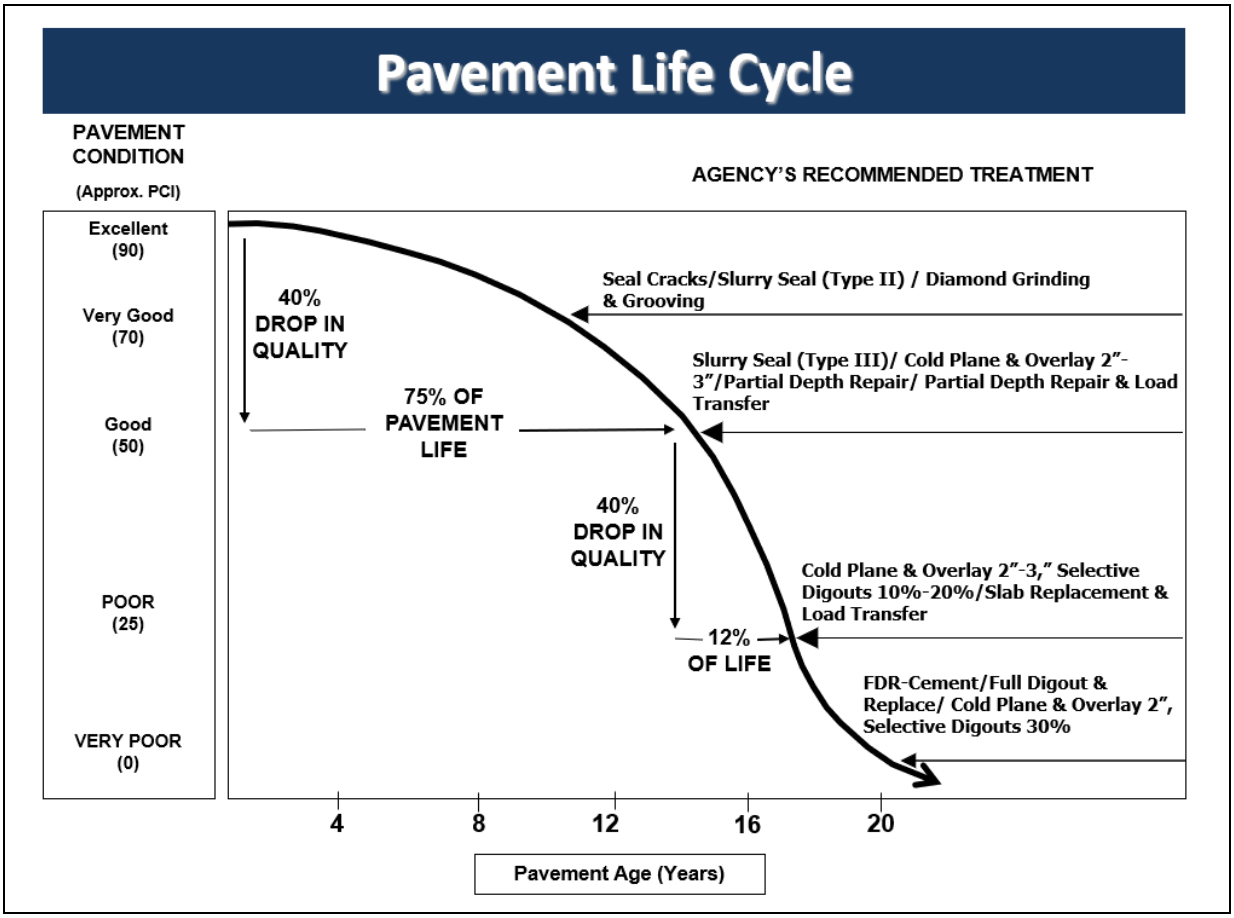

A visual survey of approximately 316 centerline miles of the City's streets was conducted to assess the existing surface condition of each individual pavement segment within the street network. Data, including distress types and quantities, segment length and width, etc. were collected/verified for all surveyed streets. Data was categorized by street name and "pavement" segment. The identification of PMP segment limits was based on determining suitable maintenance practices for each street, which could differ from one street to another, considering factors like intersections, pavement width changes, drainage conditions, and road crown. Pavement ratings were carried out on inspection units, which are small segments of pavement or management sections chosen for detailed assessment.

Once the Pavement Condition Index (PCI) was calculated for all PMP segments, budget analyses and workload predictions could be initiated. These predictions relied on a pavement deterioration curve developed by the MTC. This curve outlines how a pavement's PCI changes as it ages.

Research has shown that the life cycle of pavement follows a specific pattern over time (refer to Figure 4 below, although it's not to scale). Pavement typically starts its life in excellent condition and remains that way for a few years without needing maintenance. However, as time goes on, the pavement condition gradually deteriorates, with the rate of deterioration increasing significantly after the pavement reaches its halfway point of life. This continued deterioration leads to an increase in the quantity and cost of maintenance needed to rehabilitate the pavement. It's at this halfway point that the City must carefully consider options for pavement repair and maintenance.

Figure 4

PAVEMENT MANAGEMENT – APPLYING A COST EFFECTIVE TREATMENT

We need to consider essential questions: Is the investment in preventive maintenance justified when compared to the potential costs of not making these repairs? Should we wait until the pavement reaches a severe state of disrepair before taking action? The answers to these questions, as well as the questions themselves, depend on the specific pavement segment in question. As illustrated in Figure 4 above, there are clear benefits to addressing pavement issues before they deteriorate to a poor or failed state. Maintenance activities not only enhance the Pavement Condition Index (PCI) of a segment but also prolong the pavement's lifespan.

Delaying repairs can result in significant cost escalations. For instance, a pavement section that could be slurry-sealed (type II) for $9.80 per square yard may eventually require a costly $95.27 per square yard 3-inch cold plane and overlay with digouts or even a $137.07 per square yard full-depth reclamation (FDR) or complete digout and replacement. In essence, postponing repairs transforms the decision from "pay today or pay tomorrow" into a "pay today or pay more tomorrow" scenario. Timely application of measures such as crack sealing and microsurfacing significantly reduces overall pavement maintenance costs, preventing the need for total pavement reconstruction when the subgrade fails.

Table 6 (below) describes the condition categories, their equivalent PCI range, and typical prescribed maintenance treatments:

Table 6

Agency's Maintenance Treatments By Condition Category		
Condition	**PCI Range**	**Typical Maintenance Treatment**
Excellent	90-100	• Do Nothing.
Very Good	70-89	• Seal Cracks • Slurry Seal (Type II) • Diamond Grinding & Grooving
Good	50-69	• Slurry Seal (Type III) • Cold Plane & Overlay 2"-3" • Partial Depth Repair • Partial Depth Repair & Load Transfer
Poor	25-49	• Cold Plane & Overlay 2"-3," Selective Digouts 10%-20%/ • Slab Replacement & Load Transfer
Very Poor	0-24	• FDR-Cement • Full Digout & Replace • Cold Plane & Overlay 2", Selective Digouts 30%

Table 6 created by Harris & Associates based on feedback from the City.

The maintenance strategy described above was based on PCI scores and the corresponding condition category. Streets with PCI scores from 90-100 are considered to be in "Excellent" condition and require no treatment. Streets with score from 70 to 89 are considered "Very Good" and may require seal cracks, slurry seal (Type II), or diamond grinding & grooving for PCC sections. Streets with scores from 50 to 69 are considered "Good," but may slurry seal (Type III), cold plane & overlay 2"-3," or partial depth repair and load transfer for PCC sections. Streets with scores from 25 to 49 are considered "Poor" and require cold plane & overlay 2"-3" with selective digouts (10%-20%), or slab replacement & load transfer for PCC sections. Streets with scores below 25 are "Very Poor" and are in need FDR-cement, full digouts & replace, or cold plane & overlay 2" with selective digouts (30%). This survey showed that approximately 17 miles of the City's streets are in the "Excellent" condition category, approximately 76 miles are in the "Very Good" category, approximately 78 miles are in the "Good" condition category, about 75 miles are in the "Poor" condition category, and 70 miles in the "Very Poor" condition category.

BUDGET NEEDS

Following the treatment strategy described in Table 6 (above) the MTC PMP software generated a Budget Needs analysis. The Budget Needs analysis projects the total budget needed to bring the City's pavement system to a condition where most pavement sections require only preventive

maintenance (i.e., PCI = 70 or higher). It is cost effective to keep pavement segments at or above a 70 PCI because the cost to maintain a high PCI is less than to bring a low PCI to a high PCI. The budget needs analysis work plan can be found in Appendix II-A.

The Budget Needs Average is determined by dividing the total cumulative budget needs, which amount to approximately $451 million, by the number of years in the analysis period, which is 5 years. In this update, the Budget Needs Average stood at approximately $90.2 million per year.
Following the calculation of Budget Needs, Budget Scenarios were executed to ascertain the necessary funding levels required for maintaining or enhancing the current Pavement Condition Index (PCI). This process aimed to generate a comprehensive list of street maintenance activities for the next five (5) years. The software conducted an in-depth analysis of each pavement management segment and assigned specific maintenance treatments, including the option of taking no action, to maximize the improvement of the entire pavement network. Maintenance treatments were allocated to as many PMP segments as the annual budget would permit. The budget scenarios were calculated using a fixed 3% allocation for preventative maintenance, and 5% interest and 5% inflation rates. The citywide maintenance needs over the five-year analysis period were determined to be approximately $90.2 million. The outcomes of the budget needs analysis are summarized in Table 7 below.

Table 7

Budget Needs					
Year	**PCI (Treated)**	**Untreated PCI**	**Preventative Maintenance ($M)**	**Rehab ($M)**	**Total Needs ($M)**
2024	78	51	$ 9,218,364	$ 241,834,594	$ 251,052,958
2025	79	48	$ 1,262,547	$ 55,869,841	$ 57,132,388
2026	81	45	$ 1,587,461	$ 55,163,510	$ 56,750,971
2027	83	42	$ 480,486	$ 53,354,992	$ 53,835,478
2028	83	40	$ 656,048	$ 31,502,220	$ 32,158,268
Totals	**N/A**	**N/A**	**$ 13,204,906**	**$ 437,725,157**	**$ 450,930,063**

Preventative Maintenance (PM) is a schedule of planned maintenance actions aimed at preventing the failure of streets. These actions are designed to detect, preclude, or mitigate degradation of a street segment. The goal of preventative maintenance is to minimize degradation and thus sustain or extend the useful life of the street. To reach that level of preventive maintenance for the entire network within the next 5 years (2024-2028), the Budget Needs analysis determined a total need of approximately $90.2 million per year. See Appendix II -A for the Needs - Projected PCI/Cost Summary.

The MTC PMP software recommended spending 3% of the budget toward preventive maintenance because it was the optimum level according to the specific conditions of the City's network. This means that the program selected 3% of the annual budget towards seal cracks and slurry seal (Type II) while the remainder of the budget was spent towards slurry seal (Type III), cold plane overlay, partial depth repair, FDR-cement, or full digout and replace. These budgets do not account for stopgap maintenance repairs, such as emergency pothole repair.

BUDGET ANALYSIS/SCENARIOS

After the MTC PMP software analyzed the pavement system according to the specified annual budgets over the 5 year analysis period, trends were evident in the PCI and deferred maintenance backlog (the amount of necessary reconstruction and overlays not performed each year due to budget constraints). An increase in deferred maintenance showed that necessary rehabilitation is currently not being performed. The total deferred maintenance in 2023 was approximately $251 million.

Deferred maintenance consists of pavement maintenance that is needed but cannot be performed due to lack of funding. Shrinking budgets have forced many agencies to defer much needed street maintenance. Deferring maintenance not only increases the frequency of resident complaints about the network condition, but also increases the costs to repair the streets. It is cost effective to keep the pavement above a certain PCI because the cost to maintain a high PCI is less than the cost to bring a street segment with a low PCI to a high PCI.

For this update, the following six annual budget scenarios were generated:

1. No Funds ($0)
2. Expected Annual Budget I ($12 million)
3. Expected Annual Budget II (18 million)
4. Maintain PCI of 52 ($30 million)
5. Five Point Increase in PCI ($43 million)
6. Unlimited Budget ($90.2 million)

The following terms are defined for each of the budget scenarios:

"Year" – Year of the program

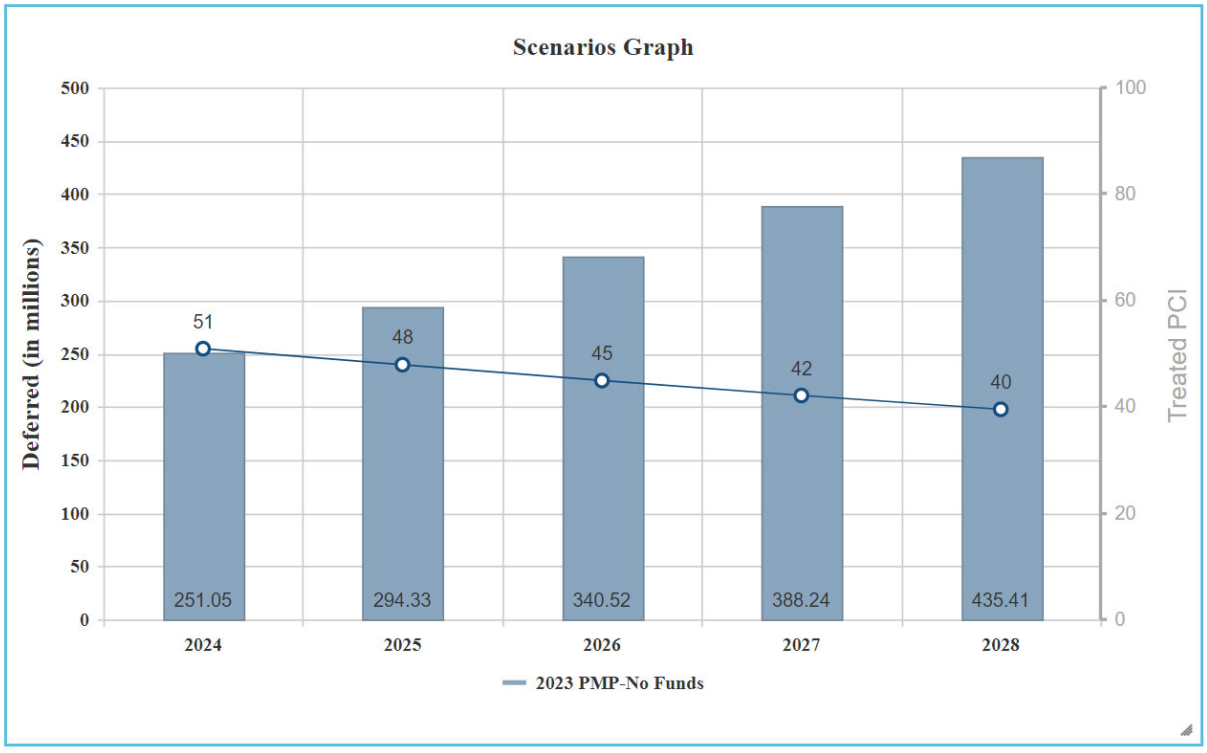

"**Budget**" – The projected budget for the given year

"**Deferred**" or "**Deferred Maintenance**" – The amount of money project for pavement maintenance that cannot be performed due to the lack of funding. The total pavement maintenance needs less the work program.

"**Average Condition**" – The projected average pavement Condition Index after completion of the Work Program.

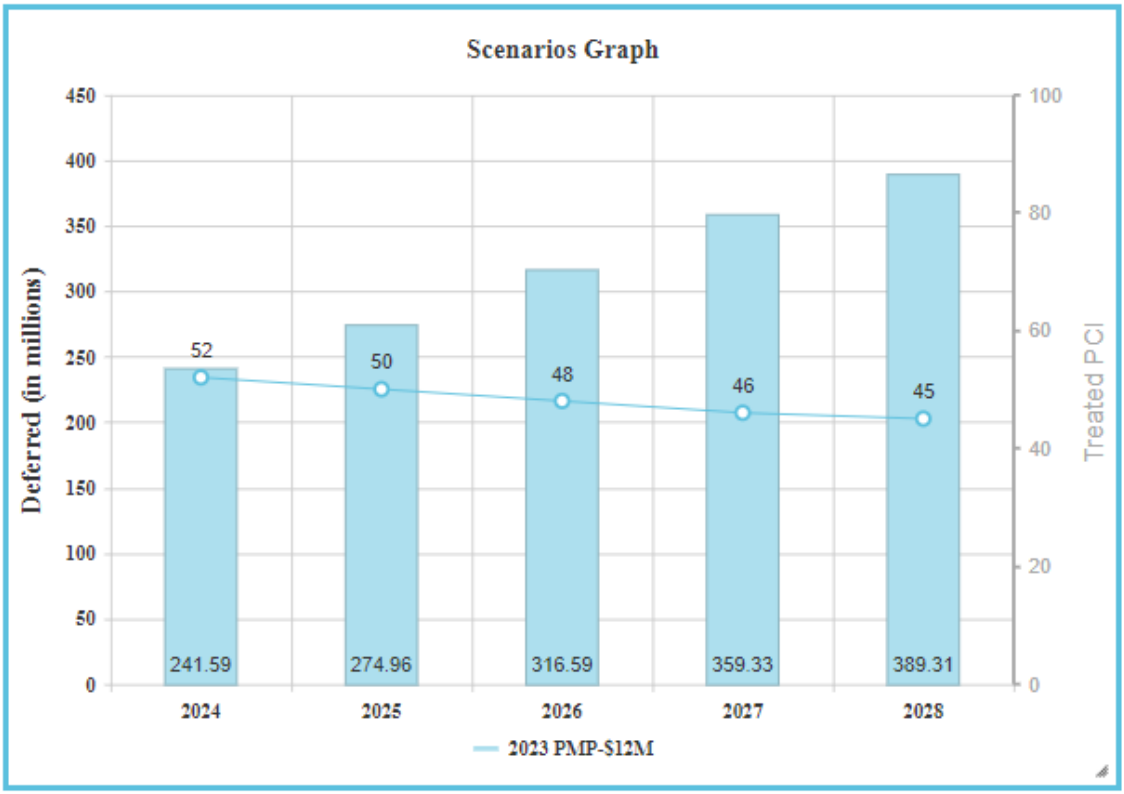

No Funds ($0) - If the City spent no money over the next 5 years on pavement maintenance needs, the amount of deferred maintenance (or "backlog") would increase from approximately $251million in 2023 million to approximately $435 million in 2028 and the average pavement condition index would decrease from 52 in 2023 to 40 in 2028.

No Funds ($0)			
Year	**Budget**	**Deferred Maintenance**	**Average Network PCI**
2023 Prior to Treatment		$251,052,959	52
2024	$0	$251,052,959	51
2025	$0	$294,327,752	48
2026	$0	$340,523,061	45
2027	$0	$388,244,038	42
2028	$0	$435,414,784	40

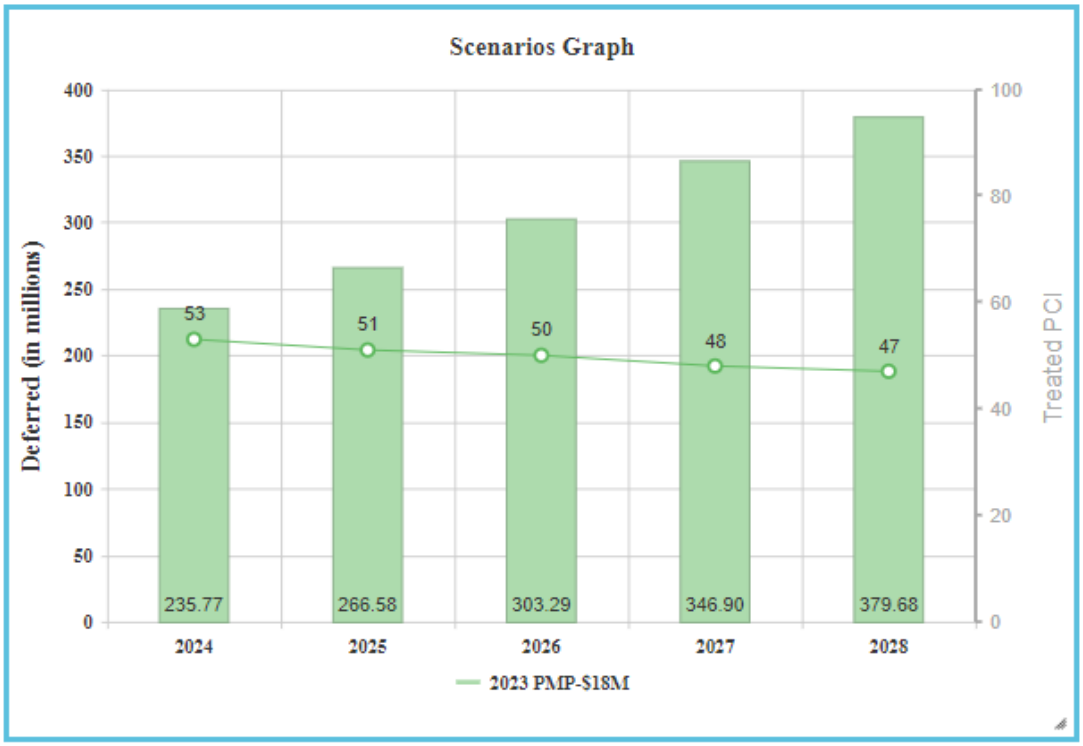

Expected Annual Budget I ($12 million) – The City has estimated its expected annual budget over the next 5 years to be $12 million per year. The City also has a project planned for year 2024 that was incorporated into the analysis. Using the $12 million budget allocation and incorporating the 2024 projects, the deferred maintenance would increase from $251 million in 2023 to approximately $389 million in 2028 and the network PCI would decrease to 45. The sections as part of this project are indicated with "**" in the "2023 - $12M – Section Selected for Treatment" report that can be found in Appendix II-E.

Expected Annual Budget I ($12 million)			
Year	**Budget**	**Deferred Maintenance**	**Average Network PCI**
2023 Prior to Treatment		$251,052,959	52
2024	$12,000,000	$241,586,858	52
2025	$12,000,000	$274,964,976	50
2026	$12,000,000	$316,591,784	48
2027	$12,000,000	$359,327,549	46
2028	$12,000,000	$389,312,180	45

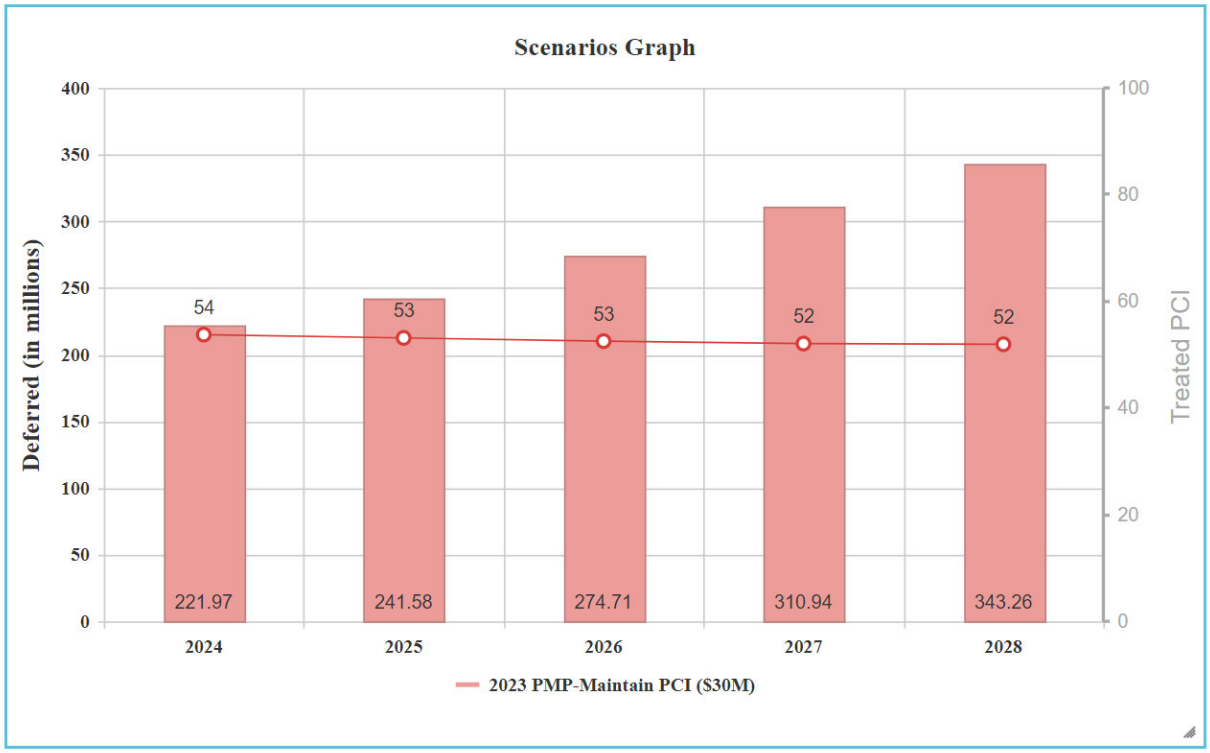

Expected Annual Budget II ($18 million) – The City has estimated its expected annual budget over the next 5 years to be $12 million per year. The City's planned project for year 2024 was also incorporated into the analysis. Using the $18 million budget allocation and incorporating the 2024 projects, the deferred maintenance would increase from $251 million in 2023 to approximately $378 million in 2028 and the network PCI would decrease to 47. The sections as part of this project are indicated with "**" in the "2023 - $18M – Section Selected for Treatment" report that can be found in Appendix II-F.

Expected Annual Budget II ($18 million)			
Year	**Budget**	**Deferred Maintenance**	**Average Network PCI**
2023 Prior to Treatment		$251,052,959	52
2024	$18,000,000	$235,772,554	53
2025	$18,000,000	$266,578,036	51
2026	$18,000,000	$303,288,392	50
2027	$18,000,000	$346,895,228	48
2028	$18,000,000	$379,683,457	47

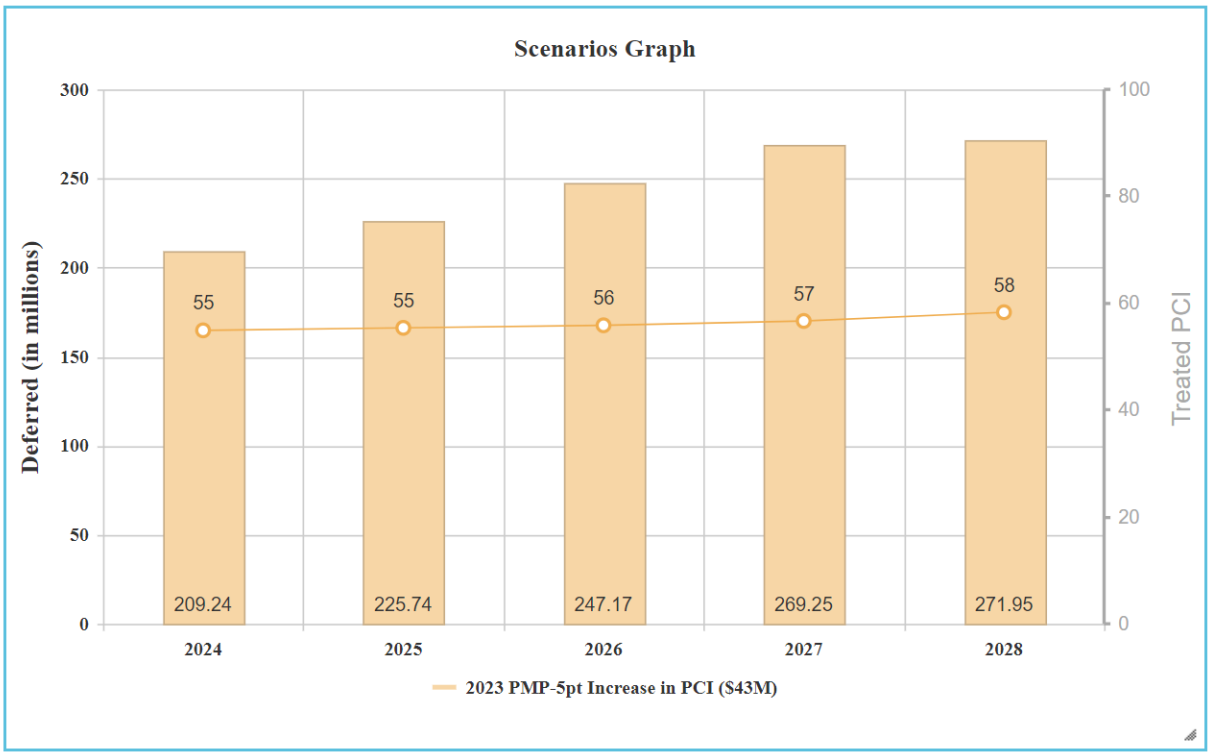

Maintain PCI of 52 ($30 million) – In order to maintain the network PCI of 52 over the next 5 years, approximately $30 million per year would need to be budgeted. Using this budget, the deferred maintenance would increase from approximately $251 million in 2023 to approximately $343 million in 2028.

Maintain PCI of 52 ($30 million)			
Year	**Budget**	**Deferred Maintenance**	**Average Network PCI**
2023 Prior to Treatment		$251,052,959	52
2024	$30,000,000	$221,970,012	54
2025	$30,000,000	$241,582,267	53
2026	$30,000,000	$274,711,961	53
2027	$30,000,000	$310,939,377	52
2028	$30,000,000	$343,258,296	52

Five Point Increase in PCI ($43 million) – In order to increase the network PCI by 5 points over the next 5 years, approximately $43 million per year would need to be budgeted. Using this budget, the deferred maintenance would increase from approximately $251 million in 2023 to approximately $272 million in 2028.

Five Point Increase in PCI ($43 million)			
Year	**Budget**	**Deferred Maintenance**	**Average Network PCI**
2023 Prior to Treatment		$251,052,959	52
2024	$43,000,000	$209,239,687	55
2025	$43,000,000	$225,735,820	55
2026	$43,000,000	$247,165,352	56
2027	$43,000,000	$269,246,046	57
2028	$43,000,000	$271,954,059	58

Unlimited Budget ($90.2 million) – In order to get the network to an optimal level in which only preventative maintenance is needed, approximately $90.2million would need to be budgeted each year based on the budget needs calculation. This would increase the network PCI from a 52 to an 83and decrease the deferred maintenance to $20 million by year 2028.

Unlimited Budget ($90.2 million)			
Year	**Budget**	**Deferred Maintenance**	**Average Network PCI**
2023 Prior to Treatment		$251,052,959	52
2024	$90,200,000	$161,817,943	60
2025	$90,200,000	$134,404,981	67
2026	$90,200,000	$105,675,947	73
2027	$90,200,000	$74,878,065	77
2028	$90,200,000	$20,486,324	83

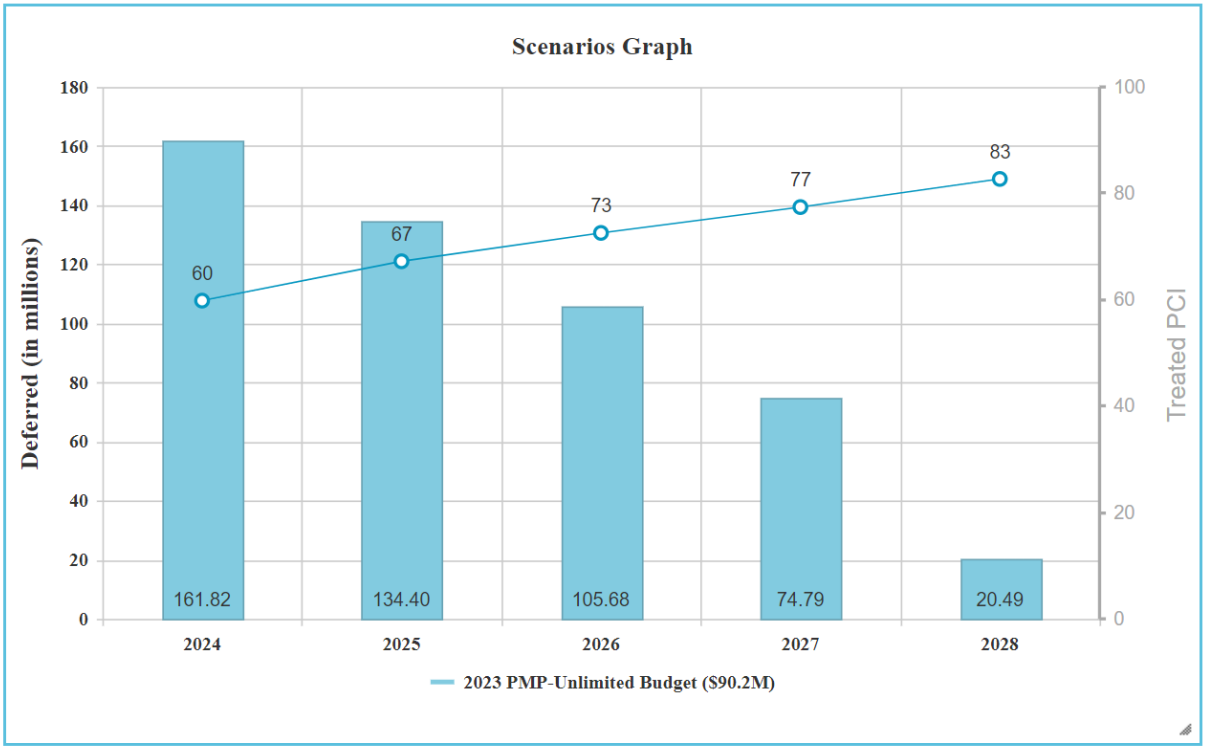

Figure 5 and 6 (below) show the impact each of the six budgets have on the PCI and deferred maintenance backlog. These charts can also be found in Appendix II-B & C. The Cost Summary Reports, which provide information on pavement funding distribution by pavement condition and the Network Condition Summary Reports, which project pavement condition trends, can be found in Appendix II-D.

Figure 7

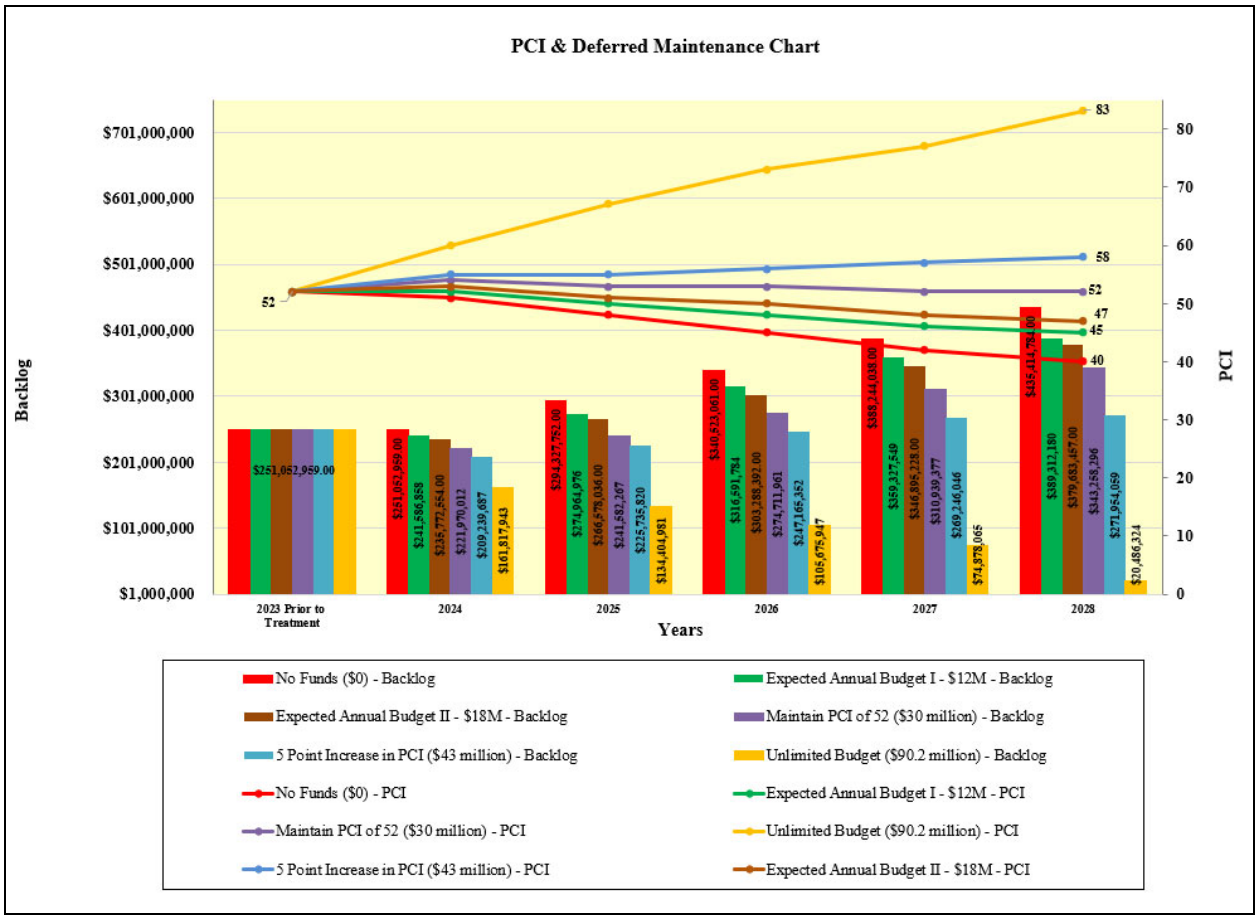

Figure 7 (above) shows the impacts of the City's network PCI and backlog for the six generated scenarios.

PROGRAM BUDGET OPTIONS AND PMP SUGGESTIONS

Harris & Associates recommends that the Agency spend an annual budget of $33 million. Spending this budget increases the PCI from a 52 to a 53 after 5 years and at the same time slows the growth of the deferred maintenance backlog.

The City should continue to utilize cost effective treatments where appropriate, such as slurry seals and crack seals and evaluate emerging cost effective techniques such as thin-bonded wearing courses and rubberized overlays. Any maintenance and rehabilitation treatments that are performed should always be input into the MTC PMP software (Harris can do this at the agency's request).

Harris & Associates commends the City for its active participation in the pavement management program and recommends that the City continue to maintain its pavement management program in order to be eligible for federal grants and funding. Harris recommends that all arterial and collector routes be re-surveyed every two years and all residential streets every four years. The costs for the distress surveys should be included in the annual pavement management budget.

The City should also perform annual database updates that include:

- Reviewing and updating the decision tree (maintenance activities and unit costs)
- Updating the street network when streets are annexed or newly constructed
- Continuing to input maintenance and rehabilitation activities

The City should update its Finance Department with any changes or adjustments that have been made to the street network and subsystems (streets assets and pavement subsystems that have been acquired through annexation, deletion, etc.) for GASB-34 compliance.

The City should continue utilizing the StreetSaver Online GIS module or in-house GIS to assist in managing the streets within the City limits. GIS technology is very useful to spatially view tabular reports and data that are derived from the pavement management system, such as scenarios, identification of maintenance and rehabilitation treatments, planning, maintenance and rehabilitation history, pavement condition index, etc.

The City of Chico's street network is currently in the range of MTC's "Good" condition category. To help maintain and or improve the current condition, certain projects have been recommended within the context of this report. Annual work program reports for the expected annual budgets be found in Appendix II-E & F. These reports provide detailed listings of suggested maintenance projects for the City of Chico based on the overall PMP suggested needs funding and base annual budgets. The report also provides a first step in identifying segments to be treated under City of Chico's annual work programs.

LIMITS OF STUDY

It must be recognized that this report is limited to the existing pavement repairs. It does not include existing deficiencies for right-of-way concrete sidewalks, curb & gutter, drainage, trees, bus pads and non-structural improvements such as decorative crosswalks, medians, lighting, and street furniture. Costs for these right-of-way repairs and improvements throughout the City would easily exceed the deferred maintenance costs (the cost of crucial maintenance work not performed in a specific year) identified in this report and can be identified and estimated separately in future reports.

The following recommendations generated by the Pavement Management Program are for planning purposes only. The resulting general recommendations are not intended to replace sound engineering judgment, which should dictate specific needs for an individual project. Final project recommendations should be weighed against the actual approach the City wishes to utilize in scheduling the workloads for contracting purposes. Once a street segment is identified for repair, a closer site visit and detailed project repair scope is required.

Maintenance and rehabilitation projects should be based on a combination of the system's recommendations weighed against the City's preferences, budget constraints, and other contributing factors. In addition, further refinements may be warranted from an engineering staff review of the pavement condition. For example, a particular pavement section may have been selected for a treatment in a given year but that work may need be postponed in order to coordinate activities with other planned work, such as utility replacement work.

In the context of a PMP report, it is important to emphasize the need for detailed project-level inspections to supplement the PMP recommendations when making decisions about pavement treatments. While PMP inspections provide valuable information about the overall condition of the pavement network and identify areas that require maintenance or rehabilitation, they may not capture

all site-specific factors that can impact the effectiveness of pavement treatments. Therefore, it is recommended to conduct detailed project-level inspections, such as predesign inspections, to identify potential issues or challenges that may not have been captured in the PMP inspection. These inspections can provide more specific information about site conditions, environmental factors, and existing infrastructure that could impact the design and construction of the project.

By supplementing the PMP recommendations with detailed project-level inspections, the agency can make more informed decisions about the appropriate pavement treatment to apply to specific locations, ensuring the treatment is effective and long-lasting. This proactive approach can also help the agency save time and money in the long run by addressing any potential issues or challenges before construction begins, reducing the risk of project delays or cost overruns.

It is important to note that the information provided in the PMP report is for planning purposes only and does not replace the need for detailed project-level inspections. Therefore, the agency should always conduct thorough site-specific inspections before making any final decisions about pavement treatments to avoid any potential litigations.

MAINTENANCE STRATEGY DEVELOPMENT

Based on the results of the condition survey and input from the City, pavement maintenance/rehabilitation strategies were developed. A standard agreement at the outset was to identify the City's maintenance work program for the next five (5) years, showing resource alternatives that affect the maintenance backlog and increase the overall condition of the pavement network.

Strategies have been recommended to come up with the most cost-effective work programs. A listing of the maintenance activities utilized in the strategy development can be found in Appendix III-C. Each activity represents the type of work that has been recommended for the long-term maintenance recommendations of the City's streets.

ANNUAL BUDGET PROJECTIONS

The budgeting process was approached with the following in mind: generate a work program for the next five (5) years based upon actual street pavement conditions and determine the funding levels required to maintain and/or improve the current level (PCI) of overall condition.

Based on current and projected pavement maintenance needs, annual work plan program alternatives have been prepared. A detailed work plan program for the City's expected annual budget (3% applied towards PM) can be found in Appendix II-E & F.

The following section provides a description of the methodology and rationale utilized in determining the recommended actions identified in this report.

MAINTENANCE STRATEGY ASSIGNMENTS

The PCI is used by the program to schedule maintenance activities for each pavement segment. The program recommends a specific maintenance activity based on the PCI and budget constraints. The City has selected a series of maintenance activities to apply to the pavement network. The unit costs

for each maintenance activity account for full project costs including design, ROW estimates, roadway surface treatment costs, sidewalk and curb ramp repairs, street lights, construction inspection and materials testing. Definitions of each maintenance activity are defined as below:

AC Sections

1. Crack Seals - A surface treatment generally utilized to prevent entry of water or other non compressible substances into the pavement.

Crack seals are used to fill individual pavement cracks to prevent entry of water or other non-compressible substances such as sand, dirt, rocks or weeds. Crack sealant is typically used on early stage longitudinal cracks, transverse cracks and reflection cracks.

2. Digouts – The process in which the material in a highly distressed area is either removed and replaced or additional material is added to cover up a distressed area.

The primary method of patching includes the replacement of materials that have been lost due to localized pavement distress or disintegration, the complete removal (dig out) and replacement of continuous segments of failed pavement, or the application of a thin layer of HMA material over segments of pavement that exhibit more surface-related distress/distortion. Once patched, the distressed area is repaired or strengthened so that it can carry significant traffic level with improved performance and lower rates of deterioration. Patches are often done in preparation of other forms of corrective maintenance, pavement preservation, and pre-treatment prior to an overlay.

3. Slurry Seals - A surface treatment generally utilized to provide new wearing surfaces and prevent water penetration of the pavement surface, thereby extending pavement life.

Slurry seals are surface treatments applied to pavements with minimal surface distress to provide new wearing surfaces and extend pavement life. A slurry seal generally consists of a mixture of conventional or latex-modified emulsified asphalt, well-graded fine aggregate, mineral filler, and water. It is placed over the existing pavement surface and is typically applied at eight (8) year intervals.

4. Cold Planing and Overlay - The application of treatments that are more cost-effective alternatives to reconstruction of the entire pavement surfaces but provide the required structural support. Cold Planing (CP) is the controlled milling of a pavement to restore its surface to a specified grade and cross slope.

An asphalt layer is placed over the existing pavement surface. Cold planing is typically performed prior to the overlay to provide a level surface for the overlay, reduce excessive crowning, and assure alignment with existing gutter line. This typically includes base repair and crack sealing prior to the application of an overlay. This treatment provides a new wearing surface and increases structural strength to the pavement section. An overlay is typically designed for a ten to fifteen (10-15) year life.

5. Full Depth Reclamation (FDR) – The process of rebuilding worn out asphalt pavements by recycling the existing roadway.

The old asphalt and base materials are pulverized, mixed with cement and water, and compacted to produce a strong, durable base for either an asphalt or concrete surface. Full-depth reclamation uses the old asphalt and base material for the new road. There's no need to haul in aggregate or haul out old material for disposal. Truck traffic is reduced, and there is little or no

waste. The road performance is improved through better stabilization, building a stronger, low-maintenance road that will last for many years.

6. **Full dig out and replace (AC) - involves the complete removal and replacement of the existing asphalt pavement.**
The process begins with the excavation and removal of the entire worn or damaged asphalt layer, down to the underlying base or subbase layers. After this removal, any necessary repairs or improvements to the base layers are performed to ensure a stable foundation. Subsequently, a new layer of hot-mix asphalt is laid, compacted, and finished to meet specified thickness and design requirements. Full dig out and replace is a comprehensive method used to address extensive deterioration, cracking, or structural issues in asphalt pavements, providing a durable and renewed surface for roadways and other applications.

PCC Sections

1. Diamond Grinding and Grooving - techniques used to enhance the quality and durability of concrete pavements.
Diamond grinding smoothens PCC surfaces by removing imperfections like bumps and cracks using machines with diamond saw blades. This process improves ride quality, safety, and pavement longevity. Diamond grooving, on the other hand, creates shallow grooves in the pavement, enhancing drainage and skid resistance, particularly in wet conditions. Both methods are applied to new and existing PCC pavements to reduce noise, prevent accidents, and extend pavement life, making them crucial for maintaining road and infrastructure safety and performance.

2. Partial Depth Repair & Load Transfer - a method to fix damaged parts of concrete roads without replacing the whole surface.
Diamond grinding smoothens PCC surfaces by removing imperfections like bumps and cracks using machines with diamond saw blades. This process improves ride quality, safety, and pavement longevity. Diamond grooving, on the other hand, creates shallow grooves in the pavement, enhancing drainage and skid resistance, particularly in wet conditions. Both methods are applied to new and existing PCC pavements to reduce noise, prevent accidents, and extend pavement life, making them crucial for maintaining road and infrastructure safety and performance.

3. Slab Replacement & Load Transfer - Slab replacement involves removing and replacing an entire damaged or deteriorated concrete section when it can't be fixed with smaller repairs.
It requires demolishing the old slab, ensuring a solid base, and pouring new concrete. Load transfer in PCC sections means evenly spreading the weight carried by one concrete slab to its neighboring slab, typically through joints or load transfer devices like dowel bars. This prevents uneven settling, maintains joint integrity, extends pavement life, and improves the road's smoothness and safety. Load transfer mechanisms, like dowel bars, are used to achieve this even weight distribution.

4. Full Digout & Replace (PCC)- a comprehensive method for repairing deteriorated or extensively damaged Portland cement concrete (PCC) sections in roadways and infrastructure.
In this process, the entire existing concrete pavement section is excavated and removed, typically down to the base or subbase layers. After the removal, any necessary subbase or foundation repairs or improvements are made. Then, fresh concrete is poured and finished to create an entirely new pavement section, meeting design specifications and thickness requirements. Full dig out and replace is employed when the existing pavement is in poor condition or when extensive repairs are needed, providing a long-lasting and structurally sound solution for maintaining the integrity and functionality of the PCC section.

MAINTENANCE DECISIONS

Once the City has selected the appropriate maintenance activities and calculated unit costs, the "Maintenance Decision Tree" (a StreetSaver application that lists all the treatments and corresponding unit costs; found in Appendix III-C) was updated. This decision tree assigns appropriate treatments by the specific needs of the streets.

The decision tree lists costs associated with treatments on specific types of pavement according to the jurisdiction. StreetSaver® uses a decision tree to model the decision-making process that agencies follow to select a maintenance or rehabilitation strategy. The decision tree contains "branches" for each functional classification, surface type, and condition category. Jurisdictions can outline their maintenance and rehabilitation strategy, choosing a treatment for each branch.

After the decision tree was established, selected budgets and work assignments were generated for each work program on an annual basis. Using the MTC recommended pavement deterioration curve for each pavement surface type and functional class, the program calculated the PCI based on the condition survey; then depending on what category the PCI was in, a preventative maintenance or rehab treatment was selected based on the weighted effectiveness and available budget. Both current and future work requirements for each pavement segment within the City were then determined.

PAVEMENT MANAGEMENT PROGRAM REPORTS

This report contains a comprehensive assemblage of pavement management reports ranging from summary reports to annual maintenance and rehabilitation scheduled reports. These reports represent reasonable projections of pavement maintenance needs and performance based on the visual condition assessment, unit cost estimates, and pavement deterioration models.

It is important to note that pavement segment dimensions and surface area, along with the recommended treatment and repair costs presented in this report, are for initial planning purposes only and will be subject to project level evaluation, design, and cost estimation. This is noteworthy due to the "implied" accuracy of reporting length and width to the nearest foot, surface area to the nearest square foot, and treatment and repair unit costs and project estimates to the nearest penny and dollar, respectively.

SYSTEM MAINTENANCE

Harris & Associates recommends that the City continue developing annual maintenance plans while

also working towards reducing the present backlog of rehabilitation projects.

In order to ensure that report outputs are accurate and credible, it is essential that the integrity of all data files be maintained. Prior to generating scenarios, all necessary updates to unit cost information and treatment data should be complete. In addition, the entire pavement network will have to be re-surveyed at regular intervals, as noted earlier in this report. This not only allows future work to be scheduled based on the most current condition data available, but it also provides City personnel with a means to more accurately monitor rates of pavement deterioration.

APPENDIX I

PAVEMENT CONDITION INDEX (PCI) REPORT / REMAINING SERVICE LIFE (RSL) REPORT

Section PCI Listing Report

This report lists the Pavement Condition Index (PCI) for each pavement management section.

Street Name:	Street Name
Street ID:	Street Identifier - 6 characters

APPENDIX II

BUDGET ANALYSIS REPORTS

A. Budget Needs Report and Treatment Cost Details- Five Year
B. Average PCI by Annual Funding Chart
C. Deferred Maintenance Cost Trend by Annual Funding Chart
D. Budget Scenario Cost and Network Summaries
E. Annual Work Program - $12 million
F. Annual Work Program - $18 million

A. NEEDS – PROJECTED PCI/COST SUMMARY – FIVE YEAR

NEEDS - PROJECTED PCI/COST SUMMARY

This report highlights the impact of projected needs funding (and lack thereof) on pavement system condition. The report also provides a cost estimate of the funding needed to bring the streets to an optimal preventive maintenance level. Finally, an "Untreated PCI" is listed. This value is an accurate portrayal of average street condition.

Year:	Year of Projection
PCI Treated:	Average Street PCI with suggested treatments applied
PCI Untreated:	Present average untreated street PCI for year. This value is most accurate reflection of present PCI
Cost:	Cost per year to apply suggested treatments
PM Cost:	Total cost over the period of analysis spent on preventative maintenance
% PM:	Percent of total cost over the period of analysis spent on preventative maintenance
Total Cost:	Total cost over the period of analysis to bring streets to optimal maintenance level.

Needs - Projected PCI/Cost Summary

Interest: 5.00% Inflation: 5.00% Printed: 9/28/2023

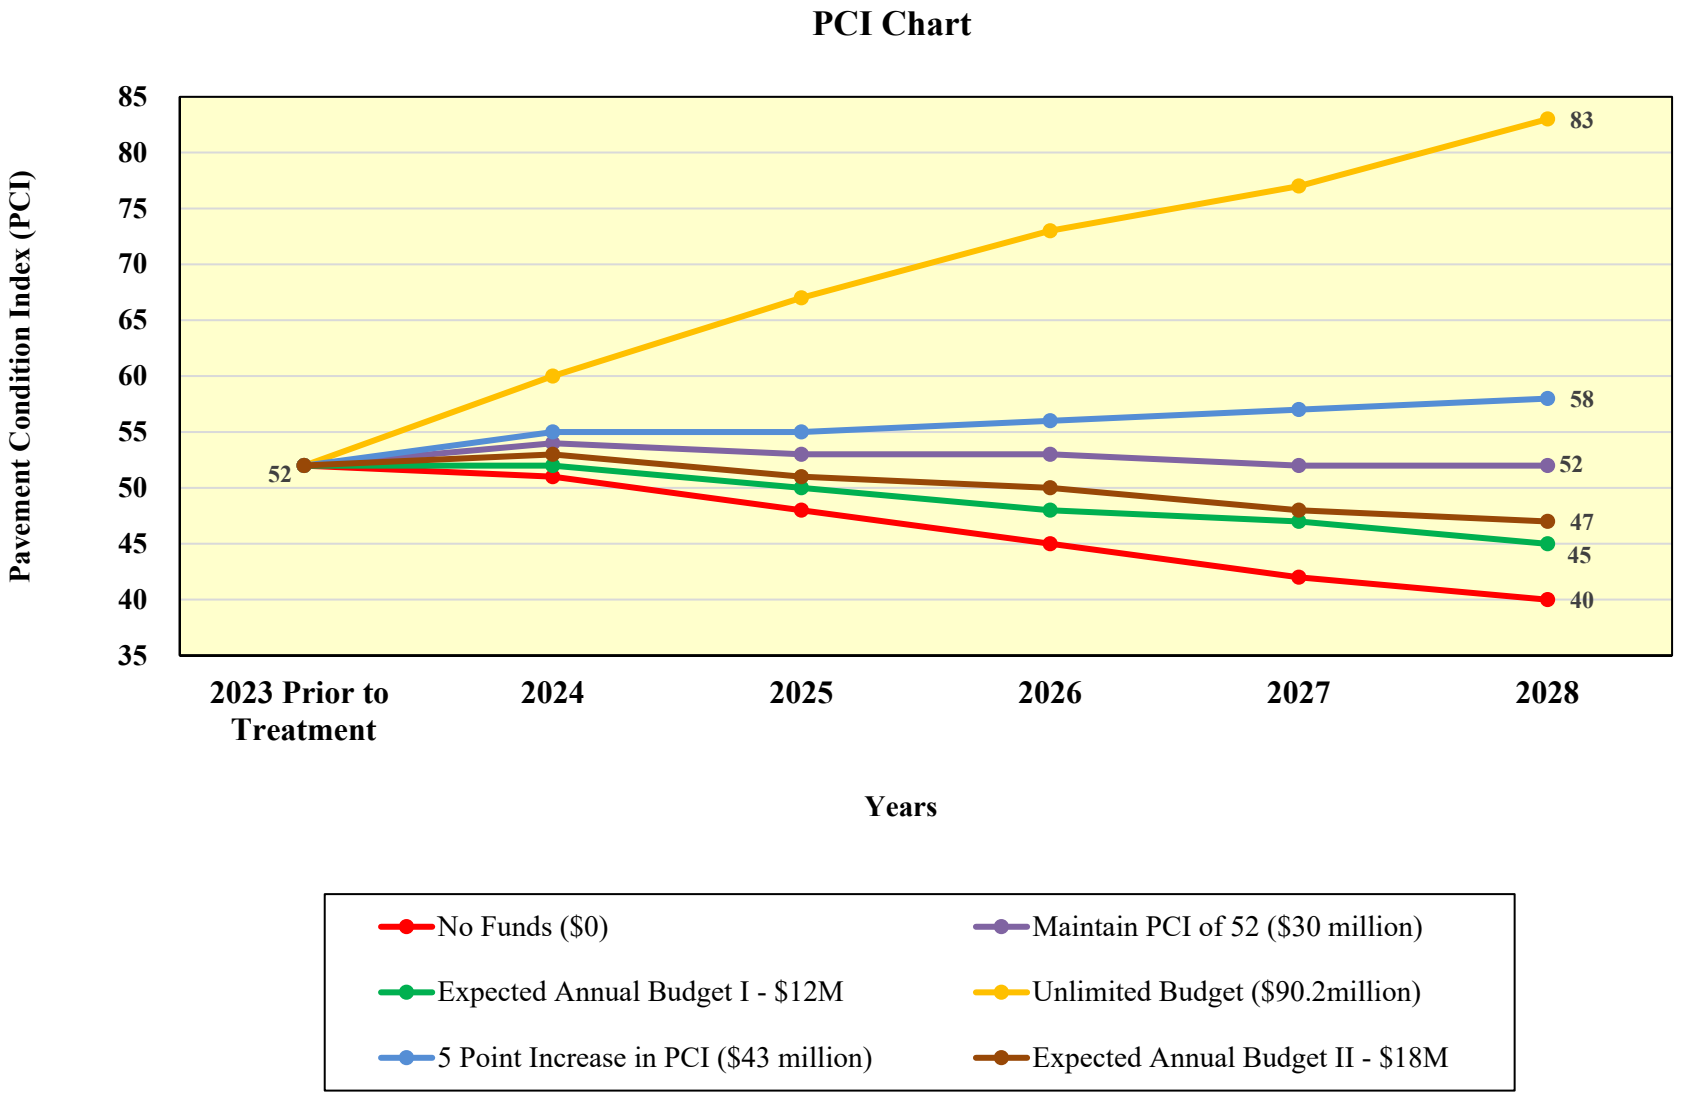

Year	PCI Treated	PCI Untreated	PM Cost	Rehab Cost	Cost
2024	78	51	$9,218,364	$241,834,594	$251,052,959
2025	79	48	$1,262,547	$55,869,841	$57,132,388
2026	81	45	$1,587,461	$55,163,510	$56,750,971
2027	83	42	$480,486	$53,354,992	$53,835,477
2028	83	40	$656,048	$31,502,220	$32,158,268

% PM	PM Total Cost	Rehab Total Cost	Total Cost
2.93%	$13,204,907	$437,725,157	$450,930,064

B. AVERAGE PCI BY ANNUAL FUNDING CHART

AVERAGE PAVEMENT CONDITION INDEX (PCI) BY ANNUAL FUNDING LEVEL

This graph compares 4 different annual budget scenarios and their impact over a five year budget analysis period.

Expected Annual Budget II - $18M

C. DEFERRED MAINTENANCE COST TREND BY ANNUAL FUNDING CHART

DEFERRED MAINTENANCE COST TREND VS. ANNUAL FUNDING LEVEL

This graph compares 4 different annual budget scenarios and their impact on deferred maintenance costs (maintenance backlog) over each year of the five-year budget analysis period. Deferred maintenance is the amount of necessary rehabilitation not performed each year due to budget shortfalls

Deferred Maintenance Chart

D. BUDGET SCENARIO COST AND NETWORK SUMMARIES

SCENARIOS – COST SUMMARY REPORT

A Cost Summary report is provided in this section for each annual budget level analyzed. This specific report indicates the distribution of pavement funding between various condition levels of streets. The top portion of this report shows the interest and inflation assumptions.

The central part of the report lists the analysis year, percentage of that budget that is assigned to preventive maintenance, annual budget, activities distribution of the budget between rehabilitation (by condition category within rehabilitation, preventative maintenance, stop gap, and deferred maintenance costs. Condition Category refers to the MTC defined pavement conditions –Excellent (I), Very Good (II), Good (III), Poor (IV), and Very Poor (V). "Stop Gap" is a factored cost applied for emergency repairs (i.e. pothole repair) needed to minimally maintain a section where a section's suggested rehabilitation maintenance is deferred. "Funded Stop Gap" refers to the budget amount allocated for stop gap and "Unmet Stop Gap" refers to any deferred stop gap costs. "Deferred" refers to the dollar cost of backlogged rehabilitation. "Surplus PM" values appear if the budget percentage split between rehabilitation and preventive maintenance is too heavily weighted to preventive maintenance. In such a case, the percentage of funding to rehabilitation would be increased.

The bottom part of the report shows a summary of the total costs spent on rehabilitation, preventative maintenance, and stop gap (funded and unmet) according to functional class.

SCENARIOS – NETWORK CONDITION SUMMARY REPORT

This report details present and projected network condition trends based on the annual budget set for an individual scenario. Perhaps the most important piece of information from this report is found on the first page of the report. The table under "Project Network Average PCI by Year" shows what the overall network condition trend is when the suggested treatments are applied in comparison to when the treatments are not applied.

THESE REPORTS ARE PROVIDED FOR EACH OF THE COMPARISON SCENARIOS

E. ANNUAL WORK PROGRAM – $12 million

SECTIONS SELECTED FOR TREATMENT

This list is generated from the budget scenario that reflects the most likely annual budget to be achieved. It basically tells you which sections can be treated each year given a constrained budget.

The header portion of the report tells you interest rate, inflation rate, budget level, and preventive maintenance allocation assumptions.

In the top left in bold on the first page you will find the following: **Year: 2024**
A similar type header will be found at the start of each year's suggested treatments for each year of the analysis.

The following are descriptions of fields in this report:

Street Name:	Street Name
Beginning Location:	Beginning location of section
Ending Location:	End location of section
Street ID:	Street Identifier
Section ID:	Section Identifier
FC:	Functional Class (A-Arterial, C-Collector, R-Residential, O - Other)
Surface:	Surface Type - Original Pavement (AC), Overlay (AC/AC), Surface Treatment (ST), and Portland Cement Concrete (PCC)
PCI:	An approximation of what the PCI would be if the recommended treatment was done
Cost:	Cost for entire treatment (based on unit costs defined in decision tree)
Rating:	This number is a ranking of cost-effectiveness by treatment. The number is for ranking purposes only
Treatment:	Suggested treatment for each section with total cost for the type of treatment
Year Total:	At the end of each year's section you will find a total of the treatment costs for that year.

F. ANNUAL WORK PROGRAM – $18 million

SECTIONS SELECTED FOR TREATMENT

This list is generated from the budget scenario that reflects the most likely annual budget to be achieved. It basically tells you which sections can be treated each year given a constrained budget.

The header portion of the report tells you interest rate, inflation rate, budget level, and preventive maintenance allocation assumptions.

In the top left in bold on the first page you will find the following: **Year: 2024**
A similar type header will be found at the start of each year's suggested treatments for each year of the analysis.

The following are descriptions of fields in this report:

Street Name:	Street Name
Beginning Location:	Beginning location of section
Ending Location:	End location of section
Street ID:	Street Identifier
Section ID:	Section Identifier
FC:	Functional Class (A-Arterial, C-Collector, R-Residential, O - Other)
Surface:	Surface Type - Original Pavement (AC), Overlay (AC/AC), Surface Treatment (ST), and Portland Cement Concrete (PCC)
PCI:	An approximation of what the PCI would be if the recommended treatment was done
Cost:	Cost for entire treatment (based on unit costs defined in decision tree)
Rating:	This number is a ranking of cost-effectiveness by treatment. The number is for ranking purposes only
Treatment:	Suggested treatment for each section with total cost for the type of treatment
Year Total:	At the end of each year's section you will find a total of the treatment costs for that year.

APPENDIX III

BACKUP DATA

A. Section Description Inventory Report

B. Inventory of Applied Maintenance

C. Maintenance Treatment Decision Tree

A. SECTION DESCRIPTION INVENTORY REPORT

The Section Description Report lists the basic descriptors and geometry of each pavement management section. Each record is the basic unit of the PMS.

Street Name:	Street Name
Street ID:	Street Identifier - 6 characters
Section ID:	Section Identifier – 6 characters
Beginning Description	Start of pavement section
Ending Description	End of pavement section
Functional Class	Functional class of pavement section – limited to arterial, collector, residential, or local/other.
Surface Type	Surface type of section – limited to AC surface (original AC), AC/AC (overlay), AC/PCC, PCC, Surface Treatment (chip seal, etc. as primary surface), and G (gravel).
Date of Construction	Year of last overlay or reconstruction
No. Lanes	Number of traffic lanes (average, turn lanes excluded)
Length (ft)	Length of section
Width (ft)	Width of section
Area (sq.ft.)	Area of section
Cul-de-sac	Is section a cul-de-sac?
***General Code**	Optional Code Field – used typically to define special districts, areas, corp yard responsibilities, council district, etc.
***Area ID**	Optional Code Field – used typically to define special districts, areas, corp yard responsibilities, council district, etc.
***Funding Source**	Optional Code Field – used typically to define funding source for section pavement funding.
***ADT**	Average Daily Traffic (ADT) for storage only – not used in calculations
***Traffic Index**	Traffic index (storage only)
***Comments**	Comments field

---

B. INVENTORY OF APPLIED MAINTENANCE TREATMENTS

This report lists applied maintenance treatments that have been applied since the previous database update. The report lists treatments for each management section by treatment and year of treatment.

Street ID:	Street Identifier - 6 characters
Section ID:	Section Identifier – 2 characters
Street Name:	Street Name
Begin Location:	Begin Location
End location:	End location
Len:	Length of the segment
Wid:	Width of the segment
Area (Sq. Ft).:	Area of treatment
FC:	Functional Classification
ST:	Surface Type
Treatment:	General description of treatment applied to section
Date:	Date treatment applied to section (or data was entered into computer). Date usually more indicative of year treatment applied than specific month.

2023 PMP City of Chico

C. MAINTENANCE TREATMENT DECISION TREE

This report details the rehabilitation decision branches defined for the town's treatment analysis. A treatment strategy is defined for each combination of functional class and surface type found in the Town's pavement system.

Functional Class: Functional Class

Surface: Surface Type

Condition Category: Condition categories based on PCI ranges

Cat.	PCI - Description
I	70-89 Requires Preventative Maintenance
II	50-69 Predominantly Non-Load Related Distresses
III	50-69 Predominantly Load Related Distresses
IV	24-49 Near failure
V	0-24 Requires reconstruction

Treatment Type: Treatment defined for decision branch

Treatment : Detail of the treatment type

Decision Tree

Printed: 11/10/2023
